SUMMARY

Full-stack Software Engineer who takes SaaS products from idea to live production — most recently leading STREXYL, a live marketplace with real-time deal rooms, Stripe payments, and a Claude-powered AI assistant. 3 years of experience across NestJS, Next.js, Node.js, and React. Strong in multi-tenant architectures with RBAC, Stripe subscription billing, real-time WebSocket systems, and serverless AWS backends (Lambda, API Gateway, S3, SES). Comfortable across the full delivery lifecycle: Dockerized services, GitHub Actions CI/CD, and Terraform-managed infrastructure. Uses AI-assisted development daily (Claude Code, subagents, MCP) to ship faster without lowering quality.

EXPERIENCE

Associate Software Engineer Feb '26 — Present
Coding Pixel Lahore, Pakistan

- Lead engineer on STREXYL, a live short-term-rental deal marketplace (see Projects).
- Engineered FitWorks end to end, a multi-tenant gym-management SaaS (NestJS + Next.js) with five-role access control (super admin, gym owner, head coach, coach, client), per-tenant data isolation, and role-scoped guards on every endpoint.
- Integrated Stripe for gym subscriptions and recurring client memberships, with webhook handlers for subscription lifecycle events (created, updated, canceled, payment failed) that keep tenant state in sync.
- Built real-time chat across all five roles with WebSockets and persistent history, S3 uploads for workout videos and nutrition media, and AWS SES transactional emails (onboarding, receipts, reminders).

Full-Stack Developer May '25 — Dec '25
Shopex Lahore, Pakistan

- Delivered three production projects end to end (DM-InjuryLaw, Modern Remodeling, Cardiothene): backend services in Node.js and Python, REST APIs, and database schemas in PostgreSQL and MongoDB.
- Shipped React frontends with designers and backend engineers, owning features from API contract to deployed UI.
- Integrated AI and LLM pipelines into production workflows, including Pinecone vector search for semantic call-to-case matching, AWS-hosted AI prediction services, and n8n automation.

Frontend Engineer Nov '23 — Mar '25
DevNexus Lahore, Pakistan

- Built and launched web applications on the MERN stack (MongoDB, Express, React, Node.js) with cross-functional design and engineering teams.
- Developed REST APIs with Node.js and Express backed by MongoDB.
- Implemented and integrated third-party payment gateways into checkout flows.

PROJECTS

STREXYL, Coding Pixel — strexyl.com Jun '26 — Present

- Leading development of a deal marketplace for the short-term-rental industry, where operators, co-hosts, investors, and realtors find partners, negotiate, and close deals; built with NestJS, PostgreSQL/TypeORM, Next.js, and a React + Vite admin panel.
- Built real-time messaging with Socket.io and Redis: structured proposals (accept, decline, counter), deal rooms with pinned terms and shared files, and contact-detail masking that keeps deals on the platform until a proposal is accepted.
- Integrated Stripe for memberships, listing fees, and boosts, plus Stripe Identity verification; Google Calendar and Meet call scheduling; and Mapbox map search that stays in sync with the results list.
- Shipped a Claude-powered AI concierge that uses tool calling over live platform data to answer questions, guide onboarding, and help members find and improve listings, plus AI-assisted moderation of flagged content.
- Deployed with Docker, Nginx, and GitHub Actions on AWS EC2; built SEO-friendly public pages that show privacy-safe previews of live listings.

DM-InjuryLaw, Shopex — Link Oct '25 — Dec '25

- Built backend services that track missed Google Ads leads by fetching CallRail calls with GCLID, importing NEOS cases, and matching the two.
- Stored call transcripts as vectors in Pinecone, enabling semantic matching between calls and legal cases.
- Automated daily matching by combining vector search with LLM analysis to pick the best call-to-case match, improving lead attribution and recovery.

Cardiothene, Shopex — cardiothene.com May '25 — Dec '25

- Developed a serverless AWS backend (Node.js, PostgreSQL) for ECG uploads, purchases, subscriptions, promo codes, and discounts across multiple pricing models.
- Built secure workflows that send ECG data through an AI prediction pipeline and route results to doctors for review and feedback, supporting individual, bundled, and subscription users.

SYSPOS — Link Jun '24 — Mar '25

- Designed and developed a Progressive Web App (PWA) using IndexedDB so users can add items to the cart and place orders without an internet connection.
- Built automatic data sync that pushes offline actions and orders to the server once the user is back online, keeping data consistent.

SKILLS

Languages TypeScript, JavaScript, Python, SQL, C++

Frontend React, Next.js, Vite, Redux Toolkit, Tailwind CSS, shadcn/ui

Backend NestJS, Node.js, Express, FastAPI, REST APIs, WebSockets, Socket.io

Databases PostgreSQL, TypeORM, MySQL, MongoDB, Redis, Pinecone, Firebase

Cloud & DevOps AWS (EC2, Lambda, API Gateway, S3, SES), Docker, Nginx, GitHub Actions, Terraform

AI & Automation Claude Code (subagents, skills, hooks, MCP servers), Claude API (tool use, prompt design), LLM pipelines, n8n

Integrations Stripe (Billing, Identity), Google Calendar & Meet APIs, Mapbox

EDUCATION

BS in Software Engineering, The University of Lahore (GPA: 3.2) Sep '21 — May '25

Lahore, Pakistan
